-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 04 February 2004.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

DETAILED ACTION

Drawings

The drawings are objected to because **Figure 3** does not correspond to either **Figure 1** or **2** in the crosshatched region showing a continuous bar within the spine. The view would be correct if it showed on the left side either **11** or **12** and on the right the remaining plate not selected for the left. However, applicant states that one only sees plate **12** in **Figure 3**. From such a view, it would require the crosshatched region to be split with gaps (**132**). Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

The abstract of the disclosure is objected to because it is a mere recitation of claim 1 as a run-on sentence. The abstract is to be between 50 and 150 words and clearly and concisely conveys what applicant feels is his/her invention. Correction is required. See MPEP § 608.01(b).

The disclosure is objected to because of the following informalities: A misspelling on page 4 "tconcern."

Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Theken, et al (US Patent 6,228,085).

Theken, et al discloses a bone fixation system where there are two plates. The plates are the left and right sides of **Figure 1**, each containing 2 screws (**100**) for securing to the spine (**V1** and **V2**) as shown in **Figure 3**. Connecting the plates are two reinforced ribs (**80**) with integral extensions (**88A** and **88B**) that enhance engagement with the spine.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 4-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Theken, et al in view of Kuo (US Patent 6,406,478).

Theken, et al disclose all of the claimed limitations except the use of "numeral eight" holes. Kuo teaches, (column 2, lines 49-54) "because of the wavy inner periphery of the slots (22), when the screws are inserted into the slots, the screws are securely held in one position in the slot so that the bone screw will not slip in the slot..." Kuo clearly demonstrates that the numeral eight design will avoid the sliding of screws, which applicants stated as their motivation for use. Thus, it is obvious to one of ordinary skill in the art to have taken the disclosure of Theken, et al and modified it with the teaching of Kuo to obviate the sliding of a bone plate.
